# THE 'ASSURANCE' OF BEST-IN-CLASS PRODUCTIVITY

WITH MAVERIC'S MANAGED TEST SERVICES

With banks today sourcing packaged applications from scores of different vendors, the demands on IT departments are more than ever. Having mature quality gates and deep testing competency is becoming critical for ensuring:

- Shorter testing cycle times
- Reduced involvement of scarce business users
- Lesser defect leakage into production
- Lower cost of testing

Maveric has provided Managed Test Services (MTS) for several major banks and insurance firms across the globe.

We bring together experience from across 14 countries in Europe, Middle East and Asia-Pacific, including US. We are the largest specialist software testing firm in the GCC region.

Through our MTS offering, we take complete accountability for:

- ▸ **End-to-end Test Management**
- ▸ **Performance Management**
- ▸ **Test Offshoring**
- ▸ **Setting up of a Testing CoE**

End-to-end Test Management

We bring in required test leadership, processes, tools and talent to meet all functional and non-functional test requirements of our clients. Our teams work with the IT leadership team of the client to define test strategy, draw up test plans, lead test execution, reporting and optimization.

Maveric operates as the seamless, extended test team for our client organizations, taking accountability for the complete testing cycle in 'Business As Usual' (BAU).

Transforming Assurance

Performance Management

Maveric's Total Performance Management (TPM) follows a comprehensive integrated application monitoring approach by helping collect all required data to address a broad array of problems and ultimately improve application performance. TPM helps in optimizing performance levels of the OS, network, application and database layers in a given application environment.
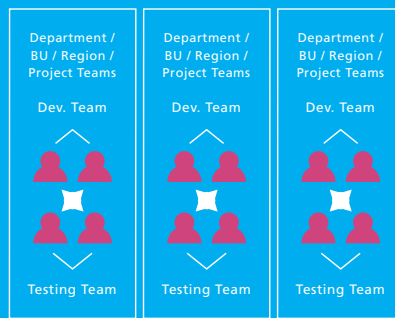

Test Offshoring

Clients derive the following tangible benefits through our test offshoring:

▶ Rapid mobilization of testing talent

▶ Higher flexibility in ramping up / down projects

▶ Between 50-70% saving in overall testing costs

▶ A strong test design process and workbench - Testac, for optimal coverage

Our offshore test lab meets international benchmark standards for security, connectivity, hardware infrastructure and people-related practices.

Setting up of a Testing CoE

Decentralized Testing - Drawbacks

Department / BU / Region / Project Teams
Dev. Team
Testing Team

Maveric's MTS - Advantages
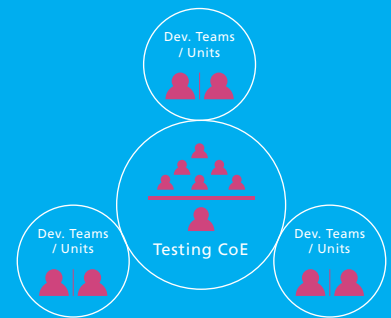

Dev. Teams / Units
Testing CoE

- Distributed testing teams
- Unplanned testing requirements
- Variations in rigor and testing process
- Sub-optimal talent usage
- Tool investments and infrastructure not optimized
- Lesser focus on testing automation

- Centralized talent pool
- Standardized processes
- Better reuse through central repository
- Quality driven by tight metrics management
- Clear focus on performance and test automation
- Better ROI on testing investment

Through our Testing CoE consulting practice, Maveric helps clients:

▶ Define clear organization level and application level test strategies

▶ Size up and plan for the right test environments

▶ Select and adopt the right tool sets for testing across the application landscape

▶ Implement knowledge management practices - building repositories, training collateral, and adopting best practices in testing
